Project Vetting

Description

During this 5-step process, the Defi Skeptic team will scrutinize, analyze, and independently review every aspect of the project following the [vetting process](#). Providing this level of detail on DeFi projects can help reduce fraud while increasing security and peace of mind for those looking to invest their hard-earned money. Projects that pass our vetting process will be added to the vetted database and given a badge to display.

Pricing

Vetting is a flat rate of \$250

Smart Contract Audits

Description

Smart Contract Audits will be completed from a functional perspective. We will evaluate the code, logic, efficiency and security of all protocols. This includes manual code review and penetration testing which looks for hidden vulnerabilities. A full report will be provided along with a badge you can display on your website/socials.

Pricing

Audits start at \$1,000 for a basic contract audit, but will be priced depending on the complexity, protocols and how many contracts are involved. Please request a quote to get an exact figure.

KYC Verification

Description

In collaboration with our partners at SEEK, we offer an industry leading KYC service which takes the applicant through a 10 step verification process backed by a dual layered security protocol. With this process, we are able to perform a thorough and detailed KYC seamlessly, providing project members with a layer of anonymity while still ensuring accountability remains a priority.

Custom Smart Contract Creation

Description

We provide full-service smart contract creation in collaboration with our partners at Dappd. Our experienced coders will work with you to deliver an entirely customized contract. Customized smart contract creation allows catering to the project's specific needs, tailoring every aspect. This customization provides greater control over your project and ensures better security by not having unneeded functions and parameters. Typical creations include Tokens, NFTs, dApps and bots, but we can code anything you need.

Pricing

Pricing will solely depend on your needs. Please schedule a consultation.

Arbitrage as a Service (AaaS)

Description

Arbitrage as a Service (AaaS) allows any project owner to stabilize the price of their Token across every liquidity pool or decentralized exchange, while earning revenue to build up their ecosystem. Typically, arbitrage revenue is lost to trading bots. This advanced mathematical algorithm will win over 99% of trades, while directing 85% of its profits back to you/your project.

Benefits of AaaS

With AaaS tax excluded, you will beat every other arbitrage bot out there, while stabilizing price among your liquidity pools and generating profit for your platform.

The best part is, it's FREE to use!

Vetted AMA Packages

Description

One major issue in the DeFi space is how projects are promoted. A very effective way of reaching an audience is by directly speaking to them. However, many of these platforms conduct unethical practices using “paid” bots to make their customer feel like they are getting more than they really are. Sometimes you may even be scammed and funds stolen. DeFi Skeptic has made an effort to source legitimate promotional platforms who do not conduct in these practices.

Benefits & Pricing

Get a full AMA tour from our vetted partners below and pay a single discounted flat rate of 14 BNB. If you do not want the full discounted tour, feel free to contact any of them individually as well! Avoid the over-hyped, over-priced AMA providers and stop paying to speak to bots! View our vetted providers below. [Get More Info!](#)
